"CROWN" LIGHTING WARE

We believe that Crown Lighting Glass is now so well known in Australia that it needs little in the way of introduction. The following information however is set out to supplement the general descriptions in this Catalogue.

"Crown" Opal Glass is made in 3 layers, the inside and outside being of Clear Glass and the centre of Pure White Opal. This method of manufacture permits the minimum amount of Opal or Obscure glass to be used thereby obtaining the minimum loss of light.

"Crown" Daylight Glass Many lines of "Crown" Units are made in a Special Glass, the inner and outer layers being of a Special Blue colouring, which counteracts the red rays of the lamp, giving a soft light which closely approaches natural daylight. The use of this glass is specially recommended for Stores, Workrooms, etc., where natural light is not obtainable.

Finishes "Crown" Glass is made in the following finishes—

PLAIN—This is a White Glazed finish.

SATIN FINISH—As the name implies is a Soft Satin-like finish, although not quite smooth it will not hold dust or dirt and is easily cleaned.

MATT Finish is a rough Acid finish which makes the surface of the glass appear a dead white.

Colours All Colour-Shading and Decorations on "Crown" Glass are guaranteed permanent, being glasses or enamel burned into the glass.

Packing All "Crown" Glass and Fittings are packed in standard cartons.

Prices of "Crown" Glass are the same all through Australia.

"Crown" Metal Fittings are made of the highest grade of materials throughout, the factory being equipped with the latest and best machinery. All Glassware and Fittings being made to Australian and British Standardisation Committee's Specifications.

We shall be glad to submit designs and quotations for the manufacture of any Special Lighting Fixtures where it is found impossible to make a satisfactory selection from this Catalogue.
